ELSEVIER

Computer Physics Communications 108 (1998) 304–305

Computer Physics Communications

Contents to volume 108

Computational physics

Pérez-Jordá, J.M.
In-place self-sorting fast Fourier transform algorithm with local memory references 1

Veseli, S.
Multidimensional integration in a heterogeneous network environment 9

Baginyan, S. and G. Ososkov
Finding tracks detected by a drift tube system 20

Mussa, H.Y., J. Tennyson, C.J. Noble and R.J. Allan
Rotation–vibration calculations using massively parallel computers 29

Koch, J.H., H.R. Mall and S. Lenz
Stochastic methods for zero energy quantum scattering 115

Chen, L.Q. and J. Shen
Applications of semi-implicit Fourier-spectral method to phase field equations 147

Utsumi, T., T. Kunugi and J. Koga
A numerical method for solving the one-dimensional Vlasov–Poisson equation in phase space 159

Popelier, P.L.A.
A method to integrate an atom in a molecule without explicit representation of the interatomic surface 180

Kalyanaraman, C. and D.C. Clary
Time-dependent wavepacket calculations on polyatomic reactive scattering 191

Pickering, S. and I.K. Snook
A massively parallel molecular dynamics algorithm for the MasPar supercomputer 200

Danese, G., I. De Lotto, D. Dotti and F. Leporati
Ewald potentials evaluated through look-up tables 211

Computer programs in physics

Hirai, M., S. Kumano and M. Miyama
Numerical solution of Q^2 evolution equations for polarized structure functions 38

Djouadi, A., J. Kalinowski and M. Spira
HDECAY: a program for Higgs boson decays in the Standard Model and its supersymmetric extension 56

Lu, D., G. He and R.H. Landau
PiN: Computation of pion–nucleon scattering and bound states with the color dielectric quark model 75

PiN: Computation of pion–nucleon scattering and bound states with the color dielectric quark model 75

Cheb-Terrab, E.S., L.G.S. Duarte and L.A.C.P. da Mota
Computer algebra solving of second order ODEs using symmetry methods 90

Verwoerd, W.S. and V. Nolting
Angle decomposition of matrices 218

Farantos, S.C.
POMULT: A program for computing periodic orbits in Hamiltonian systems based on multiple shooting algorithms 240

Aguado, A., C. Tablero and M. Paniagua
Global fit of ab initio potential energy surfaces. I. Triatomic systems 259

Gil, A. and J. Segura
A code to evaluate prolate and oblate spheroidal harmonics 267

Schuler, G.A.
Two-photon physics with GALUGA 2.0 279
